CASE STUDY

Contractor	Project Name	Type	Contact Details
Melbourne Property Rescue	Mulberry Hill	EHB60 – Vertical & Overhead	http://www.timbabuild.com.au/

Promotional case study shots of a hand built western red cedar, screen door . Made by MPR for National Trust Victoria at their flagship property “Mulberry Hill, Baxter” The door was constructed from 80 year cedar.

Construction was totally traditional including the lathe turned “Bobbin Spindles“ and this case study demonstrates how Timbabuild products can be used with colouring in natural teak colour plus used as an adhesive when final clamp & gluing as well for a permanent joint bond.

It was very well received and MPR has since quoted and advised on some of Melbourne’s finest properties including NT headquarters in Parliament Square, Victoria.
